# Methods in Transportation Econometrics and Statistics (Master) 

Winter semester 2023/24, Tutorial No. 7

## Problem 7.1: Choice probabilities in trinomial Logit and i.i.d. Probit models

A trip to a certain destination takes $T_{1}=40 \mathrm{~min}$ by foot, $T_{2}=15 \mathrm{~min}$ by bike, and $T_{3}=15 \mathrm{~min}$ when using public transport (PT). Additionally, using PT implies ad-hoc costs of $C_{3}$. The deterministic utilities are given by

$$
V_{i}=\beta_{1} \delta_{i 1}+\beta_{2} \delta_{i 2}+\beta_{3} T_{i}+\beta_{4} C_{i}
$$

with following parameter values for the MNL: $\hat{\beta}_{1}=-1, \hat{\beta}_{2}=-2, \hat{\beta}_{3}=-0.1, \hat{\beta}_{4}=-1$.
(a) Which is the reference alternative for the ACs? Give the meaning of $\beta_{1}$ and $\beta_{2}$. Give the ansatz (generic or alternative-specific?) used to model the travel times.
(b) Give the utility unit (UU) in terms of time differences and ad-hoc costs and derive the implied value of time (VoT)
(c) Calculate the MNL choice probabilities analytically.

(d) Now use the i.i.d. multinomial-Probit model (MNP) assuming that all Logit parameters (and also the Logit utilities $V_{i}$ ) are multiplied by $\sqrt{6} / \pi$ reflecting the standard deviation of the standard-normal random utility $\sqrt{V(\epsilon)}=1$ instead of $\pi / \sqrt{6}$ for the MNL. Read off the choice probability $P_{1}$ of the i.i.d. multinomial-Probit model (MNP) from the contour plot and the other probabilities by the relations $P_{2}\left(V_{1}-V_{3}, V_{2}-V_{3}\right)=P_{1}\left(V_{2}-V_{3}, V_{1}-V_{3}\right)$ und $P_{3}=1-P_{1}-P_{2}$.
(e) Discuss the small differences between the MNL and MNP probabilities.
(f) By some political initiative, PT is now freely available for all. Show that, in the MNL, some decision makers switch to the PT such that the relative attractivity $P_{1} / P_{2}$ remains constant (IIA property) while this is not the case for the MNP.

## Problem 7.2: Revealed choice: survey in the audience

A survey among the students about the realized mode decision on the way to this lecture gives the following data:

| Klasse Modus | $i=1$ (ped) | $i=2$ (bike) | $i=3$ (PT) | $i=4$ (car) |
| :--- | :---: | :---: | :---: | :---: |
| $n=1: 0-2 \mathrm{~km}$, no bike availability | 2 | - | 3 | 1 |
| $n=2: 0-2 \mathrm{~km}$, bike available | 1 | 5 | 1 | 0 |
| $n=3: 2-6 \mathrm{~km}$, no bike availability | 1 | - | 2 | 1 |
| $n=4: 2-6 \mathrm{~km}$, bike available | 0 | 7 | 6 | 0 |
| $n=5: 6-10 \mathrm{~km}$ | 0 | 2 | 8 | 3 |
| $n=6: 10-20 \mathrm{~km}$ | 0 | 0 | 1 | 5 |

As only socioeconomic variable, the bike availability was recorded. Furthermore, the values of the only exogenous variable (distance) have been agggregated into classes 1 The choice is modelled with the MNL specified as

$$
\begin{equation*}
V_{n i}(\vec{\beta})=\beta_{1} r_{n} \delta_{i 1}+\beta_{2} r_{n} \delta_{i 2}+\beta_{3} r_{n} \delta_{i 3}+\beta_{4} \delta_{i 1}+\beta_{5} \delta_{i 2}+\beta_{6} \delta_{i 3}+V_{n i}^{\text {bike }} \tag{1}
\end{equation*}
$$

where $r_{i}$ denotes the distance for person group $n$ in kilometers, and the selector-dummy $\delta_{i j}=1$ for $i=j$ and $=0$, otherwise.
(a) Give the meaning of the parameters $\beta_{4}$ to $\beta_{6}$. Why would an additional factor $\beta_{7} \delta_{i 4}$ lead to a mis-specification?
(b) Give a parameter-free expression for $V_{n i}^{\text {bike }}$ such that the bike mode can only be chosen if one is available.
(c) Show that Expressions (11) can be interpreted as a nonlinear function for the total travel time $T_{4}-T_{1}$ where the total travel times $T_{i}$ are of the form

$$
V_{n i}=-T_{n i}=-\left(T_{i}^{(0)}+\frac{r_{n}}{v_{i}}\right)
$$

Identify the parameters $\beta_{1}$ to $\beta_{6}$ with functions of the setup times $T_{i}^{(0)}$ and speeds $v_{i}$.
Hint: Notice that $V_{4}=0$, i.e., the reference alternative. Therefore, you need to formulate the utility differences $V_{1}-V_{4}$ in terms of the travel times.

[^0]
[^0]:    ${ }^{1}$ In a real investigation, every person is asked individually, so this would not be necessary.
